

What is claimed is:

1. A cement distributing vehicle comprising a powdery cement accommodation tank, an automatic packing means for packing a predetermined quantity of powdery cement in the powdery cement tank, and a power generator coupled to its engine torque take-out means for supplying power to vehicle-mounted component devices such as the automatic packing means or packing the required quantity of powder cement.

2. The cement distributing vehicle according to claim 1, wherein the power generator includes a means for distributing the torque output of the engine torque take-out means, a first power generator for generating AC 200 V power mainly for driving motors of various component devices, and a second power generator for generating AC 100 V power for a controller for controlling the motors.

3. The cement distributing vehicle according to claim 1, which further comprises a separable clutch means disposed between the engine torque take-out means and the generator for driving the generator with the torque output of the engine torque take-out means when and only when the generator is used.
